

Python3

```
if __name__ == '__main__':
    n = int(input())

    phone_book = {}

    for _ in range(n):
        entry = input().split()
        name = entry[0]
        number = entry[1]
        phone_book[name] = number

    while True:
        try:
            query = input()
        except EOFError:
            break

        if query in phone_book:
            print(f"{query}={phone_book[query]}")
        else:
            print("Not found")
```

Compiler Message

Success

Input (stdin)

```
1 3
2 sam 99912222
3 tom 11122222
4 harry 12299933
5 sam
6 edward
7 harry
```

Expected Output

JavaScript

```
const lines = input.split('\n');
let currentLine = 0;

const n = parseInt(lines[currentLine++].trim(), 10);

const phoneBook = {};

for (let i = 0; i < n; i++) {
  const entry = lines[currentLine++].split(' ');
  const name = entry[0];
  const number = entry[1];
  phoneBook[name] = number;
}

const output = [];
while (currentLine < lines.length) {
  const query = lines[currentLine++].trim();
  if (query === '') {
    continue;
  }

  if (phoneBook.hasOwnProperty(query)) {
    output.push(`${query}=${phoneBook[query]}`);
  } else {
    output.push("Not found");
  }
}

console.log(output.join('\n'));
```
