

Python 3

[Change Theme](#) Language Python 3  

```
1 # Read a full line of input from stdin and save it to our dynamically typed variable, input_string.
2 input_string = input()
3
4 # Print a string literal saying "Hello, World." to stdout.
5 print('Hello, World.')
6
7 # TODO: Write a line of code here that prints the contents of input_string to stdout.
8 print(input_string)
```

 Test case 1 

Compiler Message

Success

Input (stdin)

Download

```
1 Welcome to 30 Days of Code!
```

Expected Output

Download

```
1 Hello, World.
2 Welcome to 30 Days of Code!
```

Javascript ([node.js](#))

```
1 function processData(inputString) {
2     // This line of code prints the first line of output
3     console.log("Hello, World.");
4
5     // Write the second line of output that prints the contents of 'inputString' here.
6     console.log (inputString)
7 }
8
9 > ...
```
